

IMPORTANT Reimbursement update, provided by Click Medical, as of October 1, 2024

On February 29, 2024, CMS published its final decision to assign a NEW HCPCS Code that properly describes the addition of RevoFit® to Lower Extremity prosthetic sockets. The final decision published by CMS is summarized as follows.

FROM CMS:

- Establish a new HCPCS Level II code *L5783, “Addition to lower extremity, user adjustable, mechanical, residual limb volume management system”* to describe RevoFit®
- Primary Medicare Benefit Category – Artificial Leg (prosthetic)
- The fee schedule amounts for HCPCS L5783 will be established using the current price of \$4,495 as discussed in the preliminary determination. Deflating this price and increasing by the update factors specified in section 1834(h)(4) results in an average **2024 purchase fee schedule amount of \$3,015.92.**
- Pricing Indicator = 38
- Effective Date – April 1, 2024

The full final decision recommendation from CMS can be found [HERE](#).
