

# Your body changes. So should your socket.

Sockets built with **RevoFit**<sup>®</sup> adjust in order to promise the right fit—all day, everyday.

## What is RevoFit?

RevoFit is a kit that your provider builds into your socket so that you can control the fit and comfort with a twist of a dial.

## Why use it?

- Reduce sock ply changes
- Adjust through your clothing
- Control your fit and comfort by simply turning a dial
- Makes donning and doffing easy
- Reduce or even eliminate fitting appointments

## How does it work?

With a simple twist forward and backward of the dial, you control the micro/macro fit of your device when and where you want. It's that easy!

## Who should use it?

We have tested adjustable socket designs on adults, teenagers, top athletes, stay-at-home moms, professionals, outdoorsmen, and veterans. Whether you are an arm, a leg, or a joint disarticulation amputation level, adjustable sockets can increase your comfort and control. RevoFit is great for new amputees that will change limb size over time.

*"It's so much quicker, so much easier, and it has made my life so much better. I don't know where I'd be without it."*

- Tom Carlson, RevoFit user since 2017
